DETAILED ACTION

This Office Action is in response to the preliminary amendment filed 17 November 2003.

Information Disclosure Statement

The information disclosure statement filed 17 November 2003 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Specification

The abstract of the disclosure is objected to because the abstract is directed toward the method of making the active matrix circuit and not toward the product. Correction is required. See MPEP § 608.01(b).

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 26 recites the limitation "interlayer insulating film" in claim 26. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 16-33 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamazaki et al. (U.S. Patent 6,198,133).

Yamazaki et al. discloses an electro-optical device (Figs. 5 and 6) that contains a silicon semiconductor layer (503/504), a p type impurity region (514) provided in semiconductor layer, an interlayer insulating film (516/622) comprising silicon nitride over the semiconductor layer, where the active matrix circuit is incorporated into a liquid crystal display, image sensor or liquid crystal electro-optical device, the interlayer insulating film can be a multilayer of silicon nitride and silicon oxide and a conductive layer (522-525) comprising multilayer of titanium and aluminum over the insulating film, where the conductive layer comprises an electrode and wiring.

Art Unit: 2822

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Zhang et al. (U.S. Patent 6,071,764) discloses an active matrix circuit with a semiconductor layer, p type impurity and interlayer insulating film.
